Art Unit: 2826

Serial Number: 09/723563 Attorney's Docket #: TI-29632

Filing Date: 11/28/00;

Applicant: Ko

Examiner: Alexander Williams

Applicant's Amendment/Election of Species of figure 8 (claims 11-39) in Paper # 8, filed 8/5/02, has been acknowledged. However, the restriction requirement has been withdrawn.

Claims 1 to 10 have been canceled.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2826

invention was made to a person having ordinary skill in the art to which said subject matter pertains.

Patentability shall not be negated by the manner in which the invention was made.

Claims 11 to 41 are rejected under 35 U.S.C. § 102(e) as being anticipated by Voldman et al. (U.S. Patent # 6,198,136 B1).

In claim 11 and similar claims 21, 22 and 32, Voldman et al. (figures 1 to 6c) specifically figure 1 show an integrated circuit comprising: a functional core **20** formed on a substrate **24**, the functional core being positioned centrally on the substrate; and an I/O region **22** positioned at the periphery of the functional core, the I/O region including a plurality of I/O modules, the I/O modules including: a bond pad **30a-c** formed on a substrate; an electrostatic discharge device (see column 5, lines 17-48); and an I/O buffer wherein the I/O buffer is not positioned between the bond pad and the functional core (see column 8, lines 30-43).

The listed references are cited as of interest to this application, but not applied at this time.
